

Nejc Petek is a researcher at the University of Ljubljana, Faculty of Chemistry and Chemical Technology, Slovenia. He is currently working in the research groups of Professor Jurij Svete and Associate Professor Marko Novinec, which focus on heterocyclic chemistry and on regulation of proteins by small molecules respectively. Nejc Petek received his M.Sc. in chemistry in 2017 at the University of Ljubljana under the supervision of Professor Jurij Svete. During his PhD studies under supervision of Professor Bogdan Štefane, he has been developing novel synthetic methods in heterocyclic chemistry with emphasis on visible light induced transformations. His research interests also include early development of biologically active compounds. He was a visiting scholar at the University of Regensburg in Germany, working in the research group of Professor Oliver Reiser.
